

Abstract

The theme of the thesis is “Development (building) procedure and environmental protection”. Between the aims of this theses belongs analysis of the construction proceeding according to Building act, further especially evaluation of contemporary legal adjustment environmental protection with connection to construction proceeding and disquisition about main instruments in environmental protection. The thesis deals with environmental impact assessment procedure, objections of the participants in construction proceeding, public participation in construction proceeding and binding standpoints. The thesis is systematically composed of three chapters. The first chapter focuses on legal adjustment and main principles of environmental protection. Chapter two describes object, subjects and particular phases of construction proceeding foccused on building authority activities. The third chapter deals with particular instruments of environmental protection in construction proceeding. Finally, the thesis comprises a summary of contained conclusions.
